Course requirements for Analysis 2, Spring semester, 2022/23:

1. To be eligible to take the exams at the end of the semester you will first need to fulfill the following requirements (so-called "**audit requirements**"):

-- Being present in at least 70% of the classes.
-- Scoring at least 40% on the midterm tests, Test 1 and Test 2. In case of failure you can repeat each test once in the last week of the semester. T1 and T2 denote your percentage scores on Tests 1&2.

(Besides these requirements, homework exercises will be given regularly in class. You are encouraged to solve as many as you can, and we will discuss most of them later in class. Written submission of homework exercises is not compulsory.
The real significance of fulfilling the audit requirements is that if you happen to fail the exams, you don't need to go through the semester again next year: you can proceed directly to the exams. But if you do not fulfill the audit requirements above, you will need to start from scratch next year.)

2. Beyond the requirements above, you will need to take exams at the end of the semester in order to get a **class grade**.

-- The written Exam 120 minutes long. It consists of two parts. In the first part you will need to answer 20 true/false questions. Each correct answer is worth +5 points, each incorrect answer is worth -5 points, and each blank answer is worth 0 point. In the second part you need to solve 4 exercises, 25 points each. You need to score at least 40% on both parts. E1 and E2 denote your score in the first and second part of the exam.

-- Your scores will be weighted by the following formula:

Final score = 0.25 T1+0.25 T2+ 0.25 E1 + 0.25 E2

Your grade will be determined by your final score as follows:

0-39 Grade 1 (fail)

40-54 Grade 2

55- 69 Grade 3

70- 84 Grade 4

85-100 Grade 5

- You can improve or worsen your final grade by taking an oral examination. (Only if you have a score at least 40.)
