MR1882531 (2002j:08001) 08A02 (54E15) Pataki, Gergely (H-LAJO-IF)

On the extensions, refinements and modifications of relators. (English summary) *Math. Balkanica* (*N.S.*) **15** (2001), *no. 1-2*, 155–186.

A nonvoid family of binary relations on a nonvoid set X is called a relator on X. By establishing some connections between unary operations and set-valued functions on relators previous results of A. Száz and J. Mala on the refinements and modifications of relators are generalized in the paper.
