

Theoretical part of the exam 2023

File A

- (1) Definitions from slides 19-21
- (2) Chapman-Kolmogorov equation slide 39
- (3) Definitions from slides 47-55
- (4) everything: 84-101
- (5) Theorem on 168
- (6) everything: 171 -186
- (7) everything: 238-248
- (8) everything: 252-262

File B

- (1) everything: 4-11
- (2) everything: 14-27

File C

- (1) everything: slides 3-20
- (2) everything: slides 23-41

File D

- (1) everything 3-47
- (2) Theorem 3.1 on slide 59
- (3) Stationary distribution for $M/M/\infty$ queuing, slide 64
- (4) M/M/s queuing with balking, slides 65-66
- (5) Branching processes on slides 67-68
- (6) Fast growing population model slides 69-70
- (7) Embedd MC slides 78-80
- (8) Exit distribution and exit times slides 83-87

File E

- (1) Review slides: 3-8
- (2) Lemma 2.4 slide 16
- (3) Some measure theory: 17-20
- (4) Properties of Conditional expectation 21-22
- (5) Conditional expectation for σ -algebras slide 23
- (6) Review of measure theory slides 31-35
- (7) Conditional expectation for σ -algebras slides 37-47
- (8) Martingales: slides 49-55
- (9) Some further properties of martingales slides 58-64
- (10) Doubling strategy and related comments (process W_n) slides 65-70
- (11) Stopping times slides 71- 74
- (12) Theorem 5.22 and $M_{n \wedge T}$ slides 78-80
- (13) Exit distributions slides, Doob's optional stopping time theorem 80-88
- (14) Wald equality slide 89

- (15) Convergence theorem for non-negative supermartingales: slides 90-95
- (16) Polya Urn slides 96-101

File F

- (1) Review of the properties of the normal distribution on \mathbb{R} : slides 3-7
- (2) Definition of the one-dimensional Brownian motion: slide 10
- (3) Construction of the one-dimensional Brownian motion: slides 11-19
- (4) Equivalent definition of the Brownian motion: slide 20
- (5) Basic properties of the one-dimensional Brownian motion: slides 21-23
- (6) Brownian motion in \mathbb{R}^n and Hölder property slides 24-27.
