Szoenyi, Tamas; Wettl, Ferenc
On complexes in a finite Abelian group. II. (English)
Proc. Japan Acad., Ser. A 64, No.8, 286-287 (1988).

Classification:
∗20D60 Arithmetic and combinatorial problems on finite groups
11P99 Additive number theory
20K01 Finite abelian groups
Keywords:
complex; coset; subsets; finite abelian groups

This paper is a sequel of a previous one [ibid. 64, No.7, 245-248 (1988; see the preceding review Zbl. 693.20022)], concerning the subsets of finite abelian groups. It contains the proofs of some results stated in that one.
