On 2-level secret sharing. (English)
Des. Codes Cryptography 3, No.2, 127-134 (1993).

Classification:
*94A60 Cryptography
Keywords:
finite geometry; 2-level shared secret schemes

In this paper, using recent results in finite geometry, we study a certain of 2-level shared secret schemes. We shall present upper bounds on both the number of participants in total and on the number of participants in the lower level, which constitute the only nontrivial cases, and construct examples for the extremal cases.
