

Probability Theory 1 2nd midterm, 24th November 2022.**Group A, 8:05–8:50**

*Working time: 45 minutes. Only a simple scientific, non-programmable calculator can be used.
Maximum score (with the bonus exercise): 24 points, but we consider 20 points already as 100%.*

1. A search engine investigates 900 files of size 10 MByte each. Each of the files contain relevant informations respect to the search independently with probability 0.8. The engine saves the relevant files to a storage and skips the irrelevant files. How large shall be the storage if we want that all the relevant files can be saved to the storage with probability 98%? Use the de Moivre - Laplace Theorem, the table of the standard normal distribution is on the back of the sheet. (6 points)
2. Let us toss an unbiased (fair) die 50 times. Denote the result of the i th toss by ξ_i , $i = 1, \dots, 50$. We say that the i th toss is harmonic if $\xi_i = \frac{1}{2}(\xi_{i-1} + \xi_{i+1})$ for $i = 2, \dots, 49$. Denote X te number of harmonic tosses. What is $\mathbb{E}X = ?$ (6 points)
3. Let $f(x, y)$ be the joint probability density function of the random variables (X, Y) , where

$$f(x, y) = \begin{cases} A \cdot \sin(x + y) & \text{if } 0 < x < \frac{\pi}{2} \text{ and } 0 < y < \frac{\pi}{2}, \\ 0 & \text{otherwise.} \end{cases}$$

- (a) Find the value of $A > 0$ and the marginal densities! (4 points)
- (b) Find the conditional density function of Y under the condition $X = \frac{\pi}{4}$, furthermore calculate the probability $\mathbb{P}(Y < \frac{\pi}{4} \mid X = \frac{\pi}{4})$! (4 points)

Extra: Find the density function of the random variable $Z = X + Y$! (4 points)
