Probability 1 – Exercises

Tutorial no. 8 12th Nov 2026

8.1 Two independent fair dice are rolled. Determine the joint probability mass function of (X, Y) in the following cases:

HW (a) X is the minimum of the two rolls and Y is their sum;

(b) X is the first roll and Y is the maximum of the two rolls.

8.2 Let (X, Y) be the coordinates of a point chosen uniformly from the unit disk $\{(x, y) : x^2 + y^2 \leq 1\}$. Find the PDFs of the marginal distributions of X and Y.

HW 8.3 Let (X, Y) denote a random point of the plane that is uniformly chosen from the trapezoid with vertices $(-1, 0)$, $(0, 1)$, $(2, 1)$, $(3, 0)$.

(a) Find the joint probability density function of (X, Y).

(b) Find the probability density function of X.

(c) Find the probability density function of Y.

(d) Find the probability $\mathbb{P}(X < 2)$.

(e) Find the probability $\mathbb{P}(X < Y)$.

8.4 In each case, determine whether X and Y are independent, where f is their joint PDF:

(a) $f(x, y) = xe^{-(x+y)}\mathbf{1}_{\{x>0,\, y>0\}}$;

(b) $f(x, y) = 2\mathbf{1}_{\{0<x<y<1\}}$.

8.5 Let $X \sim \text{BIN}(5, \frac{1}{3})$ and $Y \sim \text{BIN}(7, \frac{1}{3})$. Let $Z = X + Y$. What is the distribution of Z?

8.6 Let $X_1, X_2, \cdots \sim \text{Exp}(\lambda)$ be independent exponential random variables.

(a) What is the distribution of $Z = X_1 + X_2$?

(b) What is the probability that $X_1 + X_2 + X_3 > t$?

(c) What is the expectation and variance of $X_1 + X_2 + X_3$?

8.7 N people arrive for a business dinner. Whenever someone arrives, they look around, and if they see one of their friends, they sit down to one of their tables, otherwise, they sit to a new, empty table. Each person is friends with any other person with probability p, independently from each other. Calculate the expected value of the number of occupied tables.

8.8 10 married couples are seated around a round table, and they all sit down randomly. Let X be the number of couples that manage to sit down next to each other. What is the expected value and variance of X?

HW 8.9 I throw 7 balls into 10 urns, independently from each other. What is the expected value and the variance of empty urns?

$\Phi(z)$
